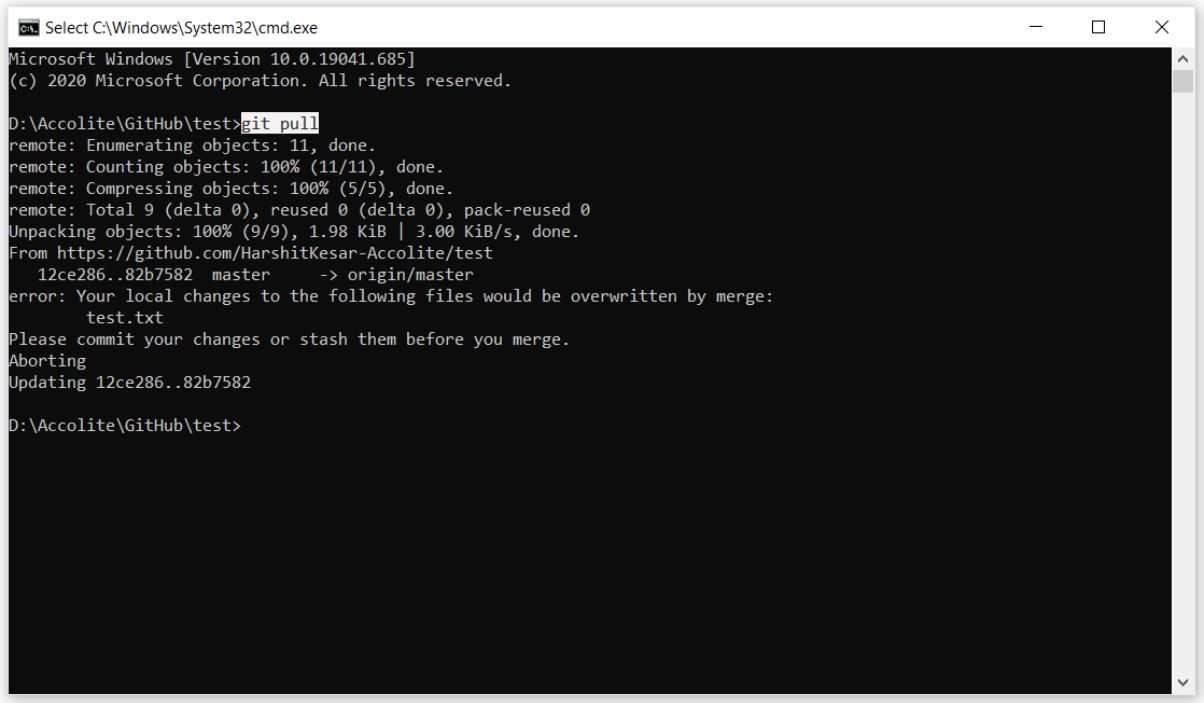
Q3.

Ans.

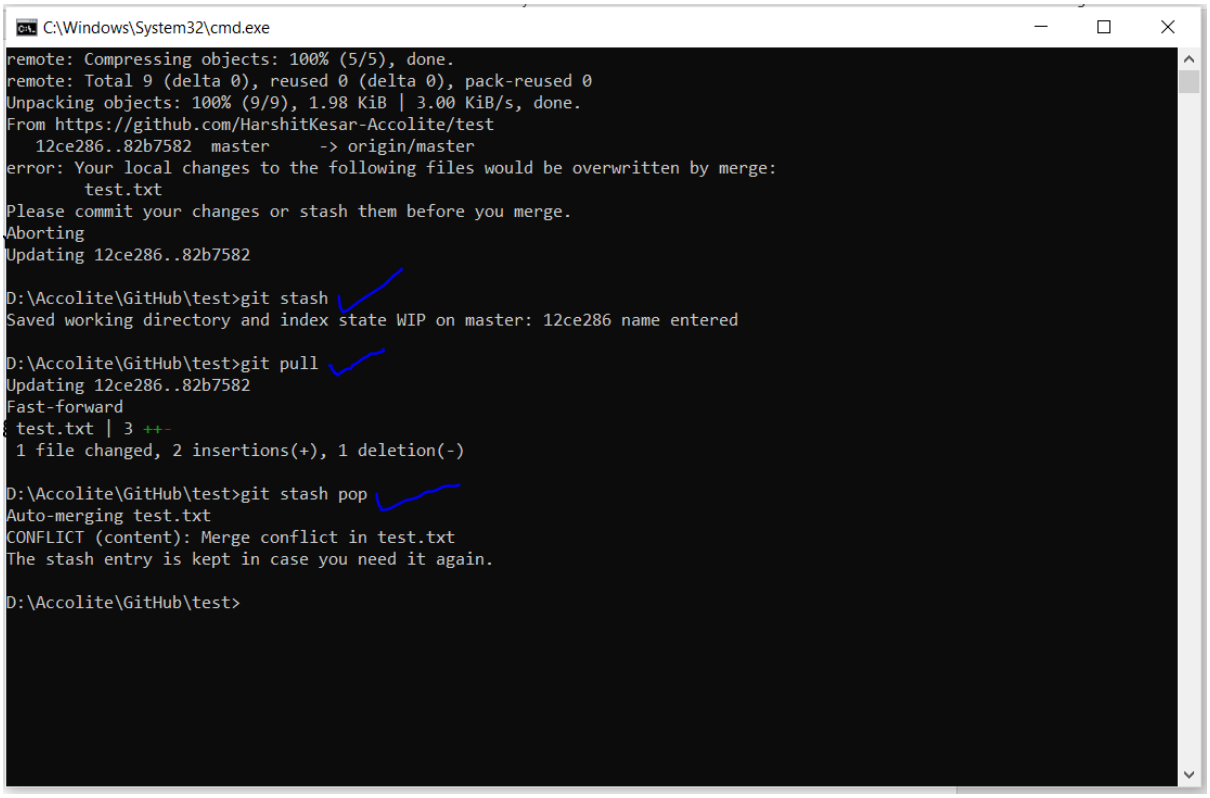


As you can see in above screen shot there is a conflit on doing “git pull” command.

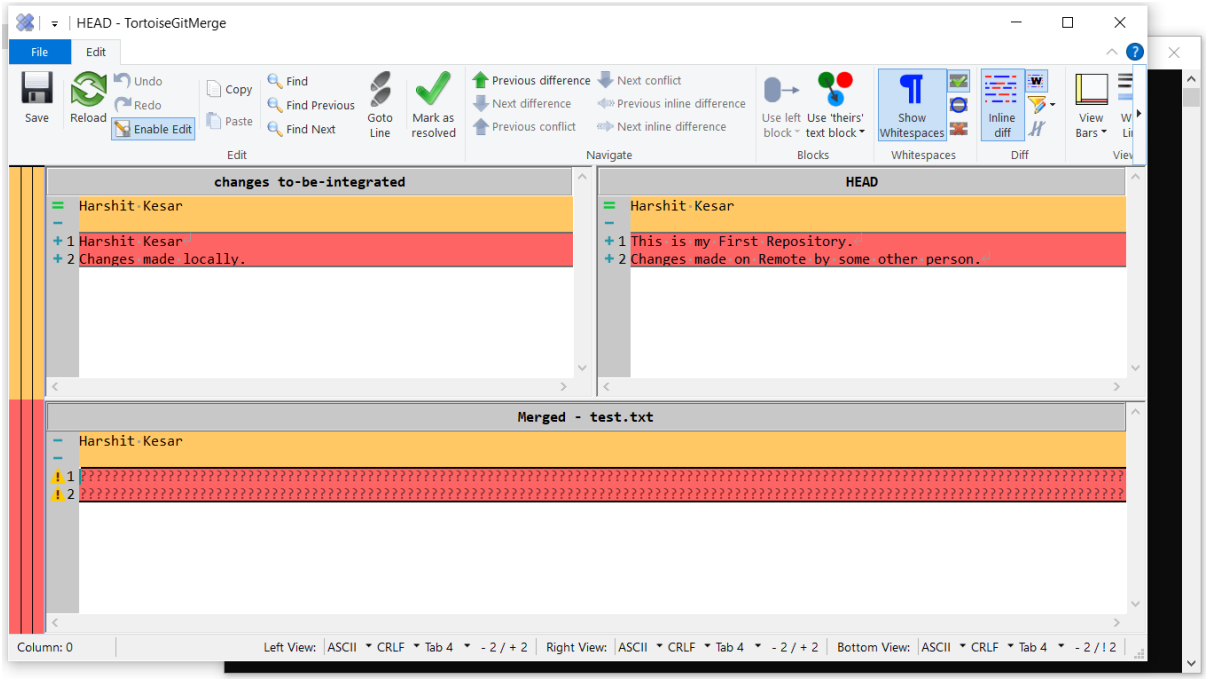
What is conflit?
Sometimes, there are competing changes as 2 or more
people might have made changes to the same line

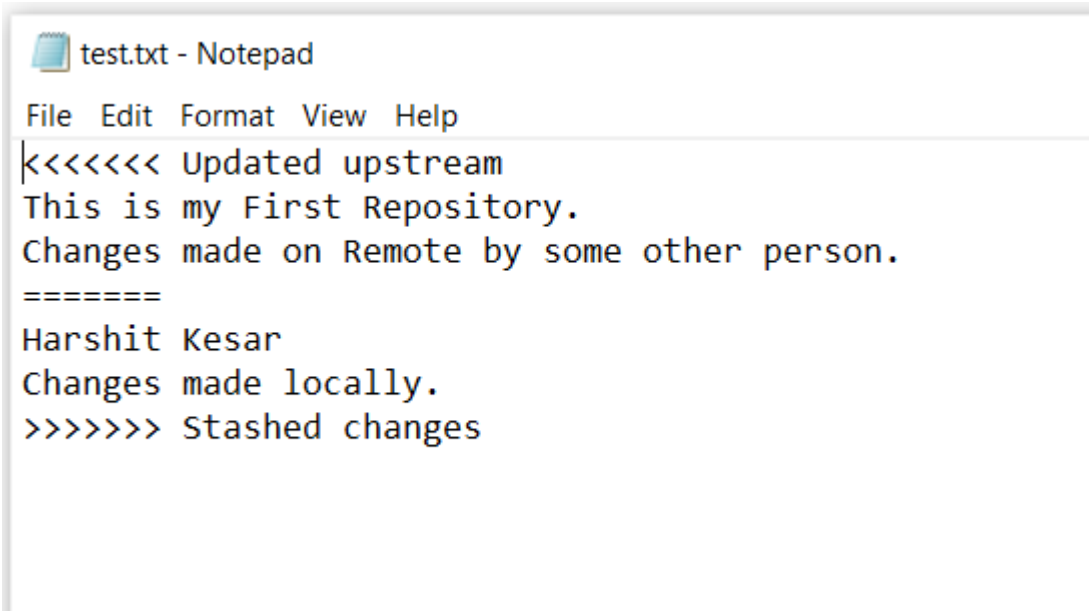
How to Handle this?
GIT automatically handles the merging of code if the changes are in different files or if they are in different lines in the same file.

If Automatic merge fails and manual intervention is needed to go through the changes and resolve the conflict.
Steps to resolve this:
Step 1: git stash Command
Step 2: git pull Command
Now here if you again try to do “git stash pop” it will not work as there is a conflit. See the Screenshot below.



Step 3: Manually resolve the conflict using Conflict resolution in GIT TORTOISE.

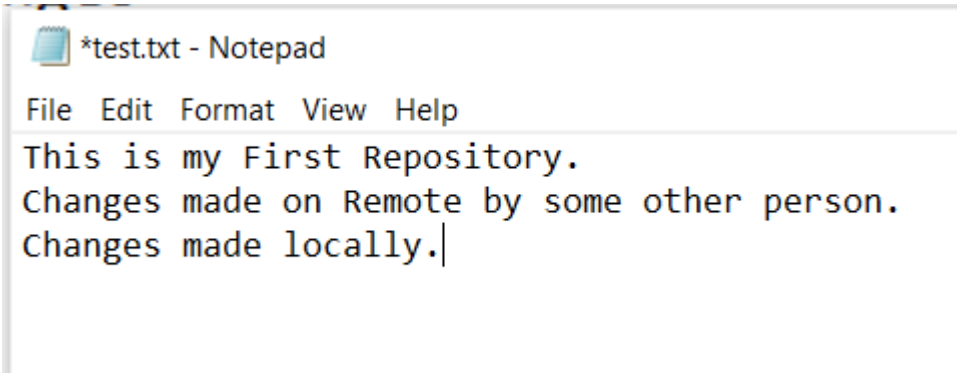




Edit the file, decide if you want to keep
Only your branch's changes
Only the other branch's changes
Or, both

Step 3.1 Now, just Remove the conflict markers <<<<<<<, =======, >>>>>>>.

File will look like this see below…



Step 3.2 Save the file now.

Step 3.3 Mark the file as resolved.

Step 4. git commit Command (As the conflict removed now).

Step 5. git push Command (to save changes on remote).

```
D:\Accolite\GitHub\test>git push
Enumerating objects: 5, done.
Counting objects: 100% (5/5), done.
Delta compression using up to 8 threads
Compressing objects: 100% (2/2), done.
Writing objects: 100% (3/3), 313 bytes | 313.00 KiB/s, done.
Total 3 (delta 1), reused 0 (delta 0), pack-reused 0
remote: Resolving deltas: 100% (1/1), completed with 1 local object.
